MALARIA ANTIGEN DETECTION

(Specimen: Whole Blood)

Investigation	Result	Biological Reference Interval	Method
P.Vivax Antigen	Not Detected	Not Detected	Immunochromatography
P.Falciparum Antigen	Not Detected	Not Detected	Immunochromatography

Comments

Malaria is a protozoan parasitic infection, prevalent in the Tropical & Subtropical areas of the world.
Four species of plasmodium parasites are responsible for malarial infections in humans viz.
P.falciparum, P.vivax, P.ovale & P.malariae.
Falciparum infections are associated with Cerebral malaria and drug resistance
whereas vivax infection is associated with high rate of infectivity and relapse.
Differentiation between P.falciparum and P.vivax is of utmost importance for better patient
management and speedy recovery

C-REACTIVE PROTEIN

(Specimen: Serum)

Investigation	Result	Unit	Biological Reference Interval

Comments:

CRP is an acute phase reactant which is used in inflammatory disorders for monitoring course and effect of therapy.
It is most useful as an indicator of activity in Rheumatoid arthritis, Rheumatic fever,tissue injury or necrosis and infections.
As compared to ESR, CRP shows an earlier rise in inflammatory disorders which begins in 4-6 hrs,
the intensity of the rise being higher than ESR and the recovery being earlier than ESR.
Unlike ESR, CRP levels are not influenced by hematologic conditions like Anemia, Polycythemia etc.,
