Personalized Summary & Vital Parameters

Ashvin

Booking ID : 13973755614 | Sample Collection Date : 07/Jun/2025

Ashvin,

Congratulations, We have successfully completed your health diagnosis. This is a big step towards staying on top of your health and identify potential to improve!

10 Vital Health Parameters of a Human Body Ecosystem

Below are the health parameters which require routine checkups for primary healthcare. The view also includes *personalised information* depending on the tests you have taken.

Your Health Score

87

Out of 100

*Calculated from test reports

Thyroid Function

Test not taken

Cholesterol Total

165.5 mg/dl

● Everything looks good

Kidney Function

Serum Creatinine : 1.17 mg/dl

● Everything looks good

Vitamin D

29.34 ng/ml

● Concern

HbA1c

Test not taken

Vitamin B12

Test not taken

Liver Function

Alanine Aminotransferase (ALT/SGPT) : 24 U/L

● Everything looks good

Calcium Total

Report Summary

Ashvin

Booking ID 13973755614 | Sample Collection Date: 07/Jun/2025

Understanding laboratory reports can be complex, often leading to unwarranted anxiety.

At Healthians, we understand that you shouldn't have to rely on a Google search to decipher your own health report. That's why we offer comprehensive summaries that are easy to understand.

Summary of Test Results

Thank you for sharing your recent health test results. It's understandable to feel concerned when faced with numbers that are outside the normal range. However, it's important to remember that these results are just one part of your overall health picture. Many factors can influence these values, and there are positive steps you can take to improve your health.

Key Areas of Focus

1.

Vitamin D Levels

: Your vitamin D levels are slightly below the optimal range. This is quite common and can often be improved with dietary changes and increased exposure to sunlight. Incorporating foods rich in vitamin D, such as fatty fish, fortified dairy products, and egg yolks, can be beneficial.

2.

Triglycerides and Blood Glucose

: Elevated triglycerides and blood glucose levels can be indicators of lifestyle factors. Focusing on a balanced diet that includes plenty of fruits, vegetables, whole grains, and lean proteins can help. Regular physical activity is also a great way to support healthy levels.

3.

Lymphocyte Count and RDW

: An elevated lymphocyte count and RDW can sometimes indicate stress or inflammation in the body. Managing stress through relaxation techniques, such as mindfulness or yoga, can be helpful. Staying hydrated and maintaining a balanced diet can also support your immune system.

4.

Liver Function Indicators

: Slightly elevated liver function tests can be a sign of various factors, including diet and lifestyle. Reducing alcohol intake, maintaining a healthy weight, and eating a balanced diet can support liver health.

Conclusion

While these results may seem concerning, they provide valuable insights into your health. By making some lifestyle adjustments, you can work towards improving these parameters and enhancing your overall well-being. Remember, small changes can lead to significant improvements over time.

DEPARTMENT OF BIOCHEMISTRY

Live More Screening Package With Free Sugar Test

Test Name	Value	Unit	Bio. Ref Interval
Fasting Blood Sugar			
Glucose, Fasting	139.65	mg/dl	70 - 100
Method: Enzymatic (Hexokinase/G-6-PDH)			
Machine: Abbott ALINITY CI			

American Diabetes Association Reference Range :

Normal	: < 100 mg/dl
Impaired fasting glucose(Prediabetes)	: 100 - 126 mg/dl
Diabetes	: >= 126 mg/dl

Conditions that can result in an elevated blood glucose level include: Acromegaly, Acute stress (response to trauma, heart attack, and stroke for instance), Chronic kidney disease, Cushing syndrome, Excessive consumption of food, Hyperthyroidism, Pancreatitis

A low level of glucose may indicate hypoglycemia, a condition characterized by a drop in blood glucose to a level where first it causes nervous system symptoms (sweating, palpitations, hunger, trembling, and anxiety), then begins to affect the brain (causing confusion, hallucinations, blurred vision, and sometimes even coma and death). A low blood glucose level (hypoglycemia) may be seen with: Adrenal insufficiency, Drinking excessive alcohol, Severe liver disease, Hypopituitarism, Hypothyroidism, Severe infections, Severe heart failure, Chronic kidney (renal) failure, Insulin overdose, Tumors that produce insulin (insulinomas), Starvation.

Cholesterol Total - Serum

Total Cholesterol	165.5	mg/dl	Desirable : <200
Method: Enzymatic			Borderline: 200-239
Machine: Abbott ALINITY CI			High : >=240
			Child (1-14 years)
			Desirable <170mg/dl
			Borderline 170-199 mg/dl
			High >199 mg/dl

Serum cholesterol can help determine your risk of the build up of plaques in your arteries that can lead to narrowed or blocked arteries throughout your body (atherosclerosis). High cholesterol levels usually don't cause any signs or symptoms, so atherosclerosis, hepatic and thyroid diseases.

Cholesterol is mainly transported in two lipoprotein classes (LDL and HDL), both of which play a contradictory role in the pathogenesis of lipid disorders. The total cholesterol concentration therefore provides only a baseline value that indicates whether further laboratory investigations of lipoprotein metabolism should be carried out (HDL, LDL, and triglycerides)

DEPARTMENT OF BIOCHEMISTRY

Live More Screening Package With Free Sugar Test

Test Name	Value	Unit	Bio. Ref Interval
Triglycerides			
Serum Triglycerides	204.0	mg/dl	Desirable : <150
Method: GPO-POD			Borderline high : 150-199
Machine: Abbott ALINITY CI			High : 200-499
			Very high : > 500

Serum Triglyceride are a type of fat in the blood. High triglyceride levels are associated with several factors, including being overweight, eating too many sweets or drinking too much alcohol, smoking, being sedentary, or having diabetes with elevated blood sugar levels. Analysis has proven useful in the diagnosis and treatment of patients with diabetes mellitus, nephrosis, liver obstruction, other diseases involving lipid metabolism, and various endocrine disorders. In conjunction with high density lipoprotein and total serum cholesterol, a triglyceride determination provides valuable information of the assessment of coronary heart disease risk. It is done in fasting state. Measurements of triglyceride are used in the diagnosis and treatment of patients with acute and chronic pancreatitis, extrahepatic biliary obstruction, and other diseases involving lipid metabolism.

Albumin/Globulin Ratio Method: Calculated	1.65	Ratio	1.2 - 2.5
SGOT/SGPT Ratio Method: Calculated	0.75	Ratio	0.7 - 1.4

Bilirubin is a yellowish pigment found in bile and is a breakdown product of normal heme catabolism. Elevated levels results from increased bilirubin production (eg hemolysis and ineffective erythropoiesis); decreased bilirubin excretion (eg; obstruction and hepatitis); and abnormal bilirubin metabolism (eg; hereditary and neonatal jaundice). Conjugated (direct) bilirubin is elevated more than unconjugated (indirect) bilirubin in viral hepatitis; drug reactions, alcoholic liver disease conjugated (direct) bilirubin is also elevated more than unconjugated (indirect) bilirubin when there is some kind of blockage of the bile ducts like in Gallstones getting

into the bile ducts tumors & Scarring of the bile ducts. Increased unconjugated (indirect) bilirubin may be a result of hemolytic or pernicious anemia, transfusion reaction & a common metabolic condition termed Gilbert syndrome.			

AST levels increase in viral hepatitis, blockage of the bile duct, cirrhosis of the liver, liver cancer, kidney failure, hemolytic anemia, pancreatitis, hemochromatosis. Ast levels may also increase after a heart attack or strenuous activity. ALT is commonly measured as a part of a diagnostic evaluation of hepatocellular injury, to determine liver health. Elevated ALP levels are seen in Biliary Obstruction, Osteoblastic Bone Tumors, Osteomalacia, Hepatitis, Hyperparathyroidism, Leukemia, Lymphoma, Paget's disease, Rickets, Sarcoidosis etc.

Elevated serum GGT activity can be found in diseases of the liver, Biliary system and pancreas. Conditions that increase serum GGT are obstructive liver disease, high alcohol consumption and use of enzyme-including drugs etc.

Serum total protein, also known as total protein, is a biochemical test for measuring the total amount of protein in serum. Protein in the plasma is made up of albumin and globulin. Higher-than-normal levels may be due to: Chronic inflammation or infection, including HIV and hepatitis B or C, Multiple myeloma, Waldenstrom's disease. Lower-than-normal levels may be due to: Agammaglobulinemia, Bleeding (hemorrhage), Burns, Glomerulonephritis, Liver disease, Malabsorption, Malnutrition, Nephrotic - Human serum albumin is the most abundant protein in human blood plasma. It is produced in the liver. Albumin constitutes about half of the blood serum protein. Low blood albumin levels (hypoalbuminemia) can be caused by: Liver disease like cirrhosis of the liver, nephrotic syndrome, protein-losing enteropathy, Burns, hemodilution, increased vascular permeability or decreased lymphatic clearance, malnutrition and wasting etc.

The main indication for testing for glucose in urine is detection of unsuspected diabetes mellitus or follow-up of known diabetic patients. Renal glycosuria accounts for 5% of cases of glycosuria in general population.

Proteinuria can be seen in nephrotic syndrome, pyelonephritis, heavy metal poisoning, tuberculosis of kidney, interstitial nephritis, cystinosis, Fanconi syndrome, rejection of kidney transplant. Hemodynamic proteinuria is transient and can be seen in high fever, hypertension, heavy exercise, congestive cardiac failure, seizures, and exposure to cold. Post-renal proteinuria is caused by inflammatory or neoplastic conditions in renal pelvis, ureter, bladder, prostate, or urethra. Ketouria can be seen in uncontrolled Diabetes mellitus with ketoacidosis, Glycogen storage disorder, starvation, persistent vomiting in children, weight reduction program, fever in children, severe thyrotoxicosis, pregnancy and protein calorie malnutrition.

Presence of bilirubin in urine indicates conjugated hyperbilirubinemia (obstructive or hepatocellular jaundice). Bile salts along with bilirubin can be detected in urine in cases of obstructive jaundice. Normally about 0.5-4 mg of urobilinogen is excreted in urine in 24 hours. Therefore, a small amount of urobilinogen is normally detectable in urine. Increased urobilinogen in urine can be seen due to hemolysis, megaloblastic anemia and haemorrhage in tissues. Decreased urobilinogen can be seen in obstructive jaundice, reduction of intestinal bacterial flora, neonates and following antibiotic treatment. The presence of abnormal number of intact red blood cells in urine is called as hematuria. It implies presence of a bleeding lesion in the urinary tract. Hematuria can be seen in glomerular diseases like Glomerulonephritis, Berger's disease, lupus nephritis, Henoch-Schonlein purpura, non glomerular diseases like Calculus, tumor, infection, tuberculosis, pyelonephritis, hydronephrosis, polycystic kidney disease, trauma, after strenuous physical exercise, diseases of prostate (benign hyperplasia of prostate, carcinoma of prostate).

Nitrites are not present in normal urine. Ingested nitrites are converted to nitrate and excreted

in urine. If gram-negative bacteria (e.g. E.coli, Salmonella, Proteus, Klebsiella, etc.) are present in urine, they will reduce the nitrates to nitrites through the action of bacterial enzyme nitrate reductase. As E. coli is the commonest organism causing urinary tract infection, this test is helpful as a screening test for urinary tract infection.

Some organisms like Staphylococci or Pseudomonas do not reduce nitrate to nitrite and therefore in such infections nitrite test is negative.

Leucocyte esterase test detects esterase enzyme released in urine from granules of leucocytes. Thus the test is positive in pyuria.

The International Council for Standardization in Haematology (ICSH) recommends reporting of absolute counts of various WBC subsets for clinical decision making. This test has been performed on a fully automated 5 part differential cell counter which counts over 10,000 WBCs to derive differential counts. A complete blood count is a blood panel that gives information about the cells in a patient's blood, such as the cell count for each cell type and the concentrations of Hemoglobin and platelets. The cells that circulate in the bloodstream are generally divided into three types: white blood cells (leukocytes), red blood cells (erythrocytes), and platelets

(thrombocytes). Abnormally high or low counts may be physiological or may indicate disease conditions, and hence need to be interpreted clinically.

The Mentzer index is used to differentiate iron deficiency anaemia beta thalassemia trait. If a CBC indicates microcytic anaemia, these are two of the most likely causes, making it necessary to distinguish between them.

If the quotient of the mean corpuscular volume divided by the red blood cell count is then 13, thalassemia is more likely. If the result is greater than 13, then iron-deficiency anaemia is more likely.

DEPARTMENT OF IMMUNOLOGY

Test Name	Value	Unit	Bio. Ref Interval
-----------	-------	------	-------------------

Vitamin D, 25-Hydroxy

VITAMIN D (25 - OH VITAMIN D)	29.34	ng/ml	30 - 100
-------------------------------	-------	-------	----------

Method: chemiluminescent immunoassay

Machine: Abbott ALINITY CI

VITAMIN D STATUS	VITAMIN D 25 HYDROXY (ng/mL), Adult	VITAMIN D 25 HYDROXY (ng/mL), Pediatric
DEFICIENCY	<20	<15
INSUFFICIENCY	20 - 30	15 - 20
SUFFICIENCY	30 - 100	20 - 100

Vitamin D is a lipid-soluble steroid hormone that is produced in the skin through the action of sunlight or is obtained from dietary sources. The role of vitamin D in maintaining homeostasis of calcium and phosphorus is well established.

The assay measures both D2 (Ergocalciferol) and D3 (Cholecalciferol) metabolites of vitamin D. Vitamin D status is best determined by measurement of 25 hydroxy vitamin D, as it is the major circulating form and has longer half life (2-3 weeks) than 1,25 Dihydroxy vitamin D (5-8 hrs)

The reference ranges discussed in the preceding are related to total 25-OHD; as long as the combined total is 30 ng/mL or more, the patient has sufficient vitamin D. Levels needed to prevent rickets and osteomalacia (15 ng/mL) are lower than those that dramatically suppress parathyroid hormone levels (20-30 ng/mL). In turn, those levels are lower than levels needed to optimize intestinal calcium absorption (34 ng/mL). Neuromuscular peak performance is associated with levels approximately 38 ng/mL.

Terms & Conditions:

- 1) Machine Data is available for last 7 days only. In case of manual testing & outsourced testing, machine data will not be available.
- 2) CBC parameters may vary when it is manually reviewed by the Pathologists.
- 3) **For Thyroid tests** - Circulating TSH shows a normal circadian rhythm with a peak between 11pm-5am and a nadir between 5pm-8pm. TSH values are also lowered after food when compared to fasting in a statistically significant manner. This variation is of the order of $\pm 50\%$, hence time of day and fasting status have influence on the reported TSH level.
- 4) **For Lipid profile** - Lipid and Lipoprotein concentrations vary during the normal course of daily activity. Also, certain drugs, diet and alcohol can have lasting effects on Triglyceride levels. To obtain best results for Lipid testing, a strict fasting of 10-12 hours with a light meal on the previous night is recommended.
- 5) Test results released pertain to the specimen submitted.
- 6) Test results are dependent on the quality of the sample received by the Lab.
- 7) The tests are carried out in the lab with the presumption that the specimen belongs to the patient named or identified in the bill/test request form/booking ID.
- 8) The reported results are for information and are subject to confirmation and interpretation by the referring doctor to co-relate clinically.
- 9) Test results may show interlaboratory variations.
- 10) Liability of Healthians for deficiency of services or other errors and omissions shall be limited to the fee paid by the patient for the relevant laboratory services.
- 11) This report is not subject to use for any medico-legal purposes.
- 12) Few of the tests might be outsourced to partner labs as and when required.
- 13) This report is not intended to replace but to lead by providing comprehensive information. It is recommended that you consult your doctor/physician for interpretation of results.
- 14) All reports might not be applicable for individuals less than 18, pregnant women or individuals suffering from diseases for which health test has not been performed or symptoms not diagnosed.
- 15) This report is based on preventive health test screening and is meant for a healthy lifestyle. It does not provide any recommendation for life threatening situations.
- 16) It is strongly recommended to take required precautions for allergic reactions or sensitivities.
- 17) Authorised partner labs as mentioned for certain tests are as below:
 - HL/PL/001- Metropolis Healthcare Ltd
 - HL/PL/002- Thyrocare technologies Limited
 - HL/PL/003- Lifecell International Pvt. Ltd. - Laboratory Services
 - HL/PL/004- Modern Diagnostic & Research Centre

SUGGESTED NUTRITION

SUGGESTED NUTRITION

Do's

- Include whole grains in your diet like whole wheat bread and other products, brown rice or hand pounded rice, oats
- Have a balanced diet that includes whole grains, pulses, dairy, fruits, vegetables, nuts and healthy fats
- Include fruits like apples, berries and melons in your diet
- Have cruciferous vegetables like broccoli, cauliflower and cabbage
- Choose low carb veggies like onions, tomatoes, beans, sprouts and green leafy vegetables
- Include nuts like almonds, walnuts and seeds like flaxseeds, sunflower seeds
- Include calcium rich foods like milk, yoghurt, cheese

Dont's

- Avoid saturated fats, trans fats, oily and greasy foods like cakes, creamy or fried foods
- Avoid red meat and organ meats
- Limit the use of oil and avoid sauces and dressings
- Avoid flavoured and seasoned foods
- Decrease intake of colas and sugary drinks
- Avoid the use of oil and avoid sauces and dressings
- Limit sugar intake
- Limit tea and coffee
- Avoid salty foods and pickles
- Limit protein intake

SUGGESTED LIFESTYLE

SUGGESTED LIFESTYLE

Do's

- Lose weight gradually and stay active
- Maintain ideal weight
- Have regular exposure to sunlight

Dont's

- Avoid long periods of inactivity
- Avoid overeating or calorie rich food
- Avoid smoking and alcohol
- Avoid overexertion without having food or drink
- Avoid strenuous exercises
- Avoid late night heavy meals
- Avoid overworking or being stressed for long time
- Limit dining out

SUGGESTED FUTURE TESTS

SUGGESTED FUTURE TESTS

- HsCRP High Sensitivity CRP - Every 4 Month
- Homocysteine - Every 4 Month
- CPK, Total - Every 4 Month
- CPK MB, Serum - Every 4 Month
- Complete Hemogram - Every 2 Month
- Peripheral Smear Examination By Pathologist - Every 2 Month
- Liver Function Test - Every 1 Month

HEALTH ADVISORY

Suggestions for Health & Well-being

Ashvin

Booking ID : 13973755614 | Sample Collection Date : 07/Jun/2025

PHYSICAL ACTIVITY

PHYSICAL ACTIVITY

Physical activities can vary from Regular walks (Brisk or normal), Jogging , Sports, Stretching, Yoga to light weight lifting etc. It is recommended to partake in physical activity at least 30 minutes a day for 3-4 days a week. If regular workout is difficult, then we can adapt changes such as using stairs instead of lift/escalators and doing household work!

BALANCED DIET

A balanced diet is the key to healthy lifestyle. Include Whole grains, vegetables, whole fruits, nuts, seeds, beans, plant oils in your diet. It is recommended to always have a high protein breakfast and a light dinner. Avoid items such as processed foods, potatoes and high calorie/sugar products. Don't forget to drink water regularly!

BALANCED DIET

STRESS MANAGEMENT

STRESS MANAGEMENT

Managing stress is an essential part of well-being. Some day to day changes can help such as having sufficient sleep (6-8 hours), indulging yourself in meditation, positive attitude towards lifestyle, using humor, traveling, talking to people whom you feel comfortable with and making time for hobbies by doing what you love to do.

BMI

BMI recommended range is 18.5 to 24.9. Your BMI is 29.35, which is on a higher side. Please fill your Health Karma to know your BMI results. BMI for your body helps prevent many untimely diseases and goes a long way.

BMI CHART

UNDERWEIGHT	NORMAL	OVERWEIGHT	OBSE
Less than 18.5	Between 18.5 - 24.9	Between 25.0 - 29.9	More than 30
*****	*****	*****	*****

Supplement Suggestions

Ashvin

Booking ID : 13973755614 | Sample Collection Date : 07/Jun/2025

Your test report has indicated that you have certain deficiencies in your body which may hamper your health & wellbeing in the longer run.

In order to fulfill the gaps in nutrition and promote a healthier body we suggest you the following supplements mentioned below:

Deficiency/Out of Range Parameter(s)	Suggested Supplement
Blood Glucose Fasting	DIABEAT-EASE
Vitamin D Total-25 Hydroxy	VITAMIN D3

To order, call 1800-572-000-4

Suggestions for Improving Deficiencies

DIABEAT-EASE

Manage diabetes the all-natural way!

An all-natural supplement that helps in lowering your blood sugar levels, thus preventing the onset of diabetes and managing it if you are already a diabetic. By reducing blood sugar levels, this naturally-sourced diabetes supplement enables you to lead a productive life, while managing your diabetes in a safe and natural way.

Remember, ignoring diabetes can cause a lot of serious complications, including:

- Vision & Hearing Loss
- Nerve Damage
- Heart Attack
- Stroke
- Dementia

Infused with the ages-proven goodness of all-natural ingredients, DIABEAT-EASE is the perfect supplement to help you control diabetes without having to worry about side-effects. Sourced from nature's own pharmacy of herbs, the ingredients in DIABEAT-EASE present the following benefits:

Saunf

Helps control blood pressure & manage diabetes

Karela

Reduces blood sugar & reduces cholesterol levels

Chirata

Helps manage high blood pressure, diabetes & detoxifies blood

Ashwagandha

Reduces blood sugar, cholesterol, & triglycerides levels

Vijayasar

Helps manage diabetes by lowering down sugar cravings

VITAMIN D3

Improve bone health with enhanced calcium absorption, the natural way

Make your muscles and bones stronger with VITAMIN D3. Sourced from natural substances, it helps in regulating the absorption of calcium and phosphorus, which help keep your bones strong and enhancing the normal immune system functioning. Vitamin D3 is an essential nutrient that's critical for normal growth and development of bones and teeth, as well as improved resistance against certain diseases.

Remember, a lack of vitamin D3 can cause dangerous health situations.

- Rickets (in children)
- Brittle Bones
- Osteoporosis
- Weakened Bones (in adults)

Strengthens Bones & Muscles

Protects Against Pneumonia & Acute Respiratory Infections

Helps in Reducing Depression

Boosts Heart Health

Aids in Kidney Disease Treatment

About Healthians Labs

How we control Report Accuracy at Healthians

Quality Control

We follow Quality control to ensure both **precision & accuracy** of patient results.

Machine Data

We save patient's result values **directly from machines** ensuring no manipulations & no fake values.

QR Code

QR Code based authenticity check on all its reports

Calibration

We make use of calibrators to evaluate the **precision & accuracy** of measurement equipment.

Equipment

Our Labs are equipped with state-of-the-art instruments with **cutting edge technology** to provide faster & reliable results.

EQA

Our Labs participate in EQA & show proven accuracy by checking **laboratory performance** through external agency or facility.

JOIN **100,000+** HAPPY USERS WHO TRUST HEALTHIANS!
