Personalized Summary & Vital Parameters

Varsha Ashvin Thakkar

Booking ID : 13973755614 | Sample Collection Date : 07/Jun/2025

Varsha Ashvin Thakkar,

Congratulations, We have successfully completed your health diagnosis. This is a big step towards staying on top of your health and identify potential to improve!

10 Vital Health Parameters of a Human Body Ecosystem

Below are the health parameters which require routine checkups for primary healthcare. The view also includes *personalised information* depending on the tests you have taken.

Your Health Score

85

Out of 100

*Calculated from test reports

Thyroid Function

Report Summary

Varsha Ashvin Thakkar

Booking ID 13973755614 | Sample Collection Date: 07/Jun/2025

Understanding laboratory reports can be complex, often leading to unwarranted anxiety.

At Healthians, we understand that you shouldn't have to rely on a Google search to decipher your own health report. That's why we offer comprehensive summaries that are easy to understand.

Summary of Health Test Results

Dear Varsha,

Thank you for sharing your health test results. It's important to remember that test values can fluctuate for various reasons, and what we see here is an opportunity to enhance your overall well-being. Let's take a closer look at the areas that need attention.

Your vitamin D levels are lower than what is typically recommended, which can affect your bone health and overall energy levels. Additionally, your cholesterol and uric acid levels are slightly elevated, which can be managed through lifestyle adjustments. Lastly, some of your blood count parameters indicate that your body may need a little extra support.

Suggestions for Improvement

1.

Increase Sunlight Exposure

: Consider spending more time outdoors in sunlight, as this can naturally boost your vitamin D levels. Aim for about 15-30 minutes of sun exposure several times a week, while being mindful of sun safety.

2.

Nutritional Adjustments

: Incorporate foods rich in omega-3 fatty acids, fiber, and antioxidants into your diet. Foods like fatty fish, nuts, whole grains, and plenty of fruits and vegetables can help manage cholesterol levels and support overall health.

3.

Stay Hydrated

: Drinking plenty of water can help with uric acid levels. Aim for adequate hydration throughout the day, which can also support your kidney function.

4.

Regular Physical Activity

: Engaging in regular exercise, such as walking, swimming, or yoga, can help improve your overall health, support healthy cholesterol levels, and enhance your mood.

Remember, small changes can lead to significant improvements in your health. Focus on these positive steps, and you may find yourself feeling better in no time.

DEPARTMENT OF BIOCHEMISTRY

Live More Screening Package With Free Sugar Test

Test Name	Value	Unit	Bio. Ref Interval
Fasting Blood Sugar			
Glucose, Fasting	75	mg/dl	70 - 100
Method: Enzymatic (Hexokinase/G-6-PDH)			
Machine: Abbott ALINITY CI			

American Diabetes Association Reference Range :

Normal	: < 100 mg/dl
Impaired fasting glucose(Prediabetes)	: 100 - 126 mg/dl
Diabetes	: >= 126 mg/dl

Conditions that can result in an elevated blood glucose level include: Acromegaly, Acute stress (response to trauma, heart attack, and stroke for instance), Chronic kidney disease, Cushing syndrome, Excessive consumption of food, Hyperthyroidism, Pancreatitis

A low level of glucose may indicate hypoglycemia, a condition characterized by a drop in blood glucose to a level where first it causes nervous system symptoms (sweating, palpitations, hunger, trembling, and anxiety), then begins to affect the brain (causing confusion, hallucinations, blurred vision, and sometimes even coma and death). A low blood glucose level (hypoglycemia) may be seen with: Adrenal insufficiency, Drinking excessive alcohol, Severe liver disease, Hypopituitarism, Hypothyroidism, Severe infections, Severe heart failure, Chronic kidney (renal) failure, Insulin overdose, Tumors that produce insulin (insulinomas), Starvation.

Cholesterol Total - Serum

Total Cholesterol	224.6	mg/dl	Desirable : <200
Method: Enzymatic			Borderline: 200-239
Machine: Abbott ALINITY CI			High : >=240
			Child (1-14 years)
			Desirable <170mg/dl
			Borderline 170-199 mg/dl
			High >199 mg/dl

Serum cholesterol can help determine your risk of the build up of plaques in your arteries that can lead to narrowed or blocked arteries throughout your body (atherosclerosis). High cholesterol levels usually don't cause any signs or symptoms, so atherosclerosis, hepatic and thyroid diseases.

Cholesterol is mainly transported in two lipoprotein classes (LDL and HDL), both of which play a contradictory role in the pathogenesis of lipid disorders. The total cholesterol concentration therefore provides only a baseline value that indicates whether further laboratory investigations of lipoprotein metabolism should be carried out (HDL, LDL, and triglycerides)

DEPARTMENT OF BIOCHEMISTRY

Live More Screening Package With Free Sugar Test

Test Name	Value	Unit	Bio. Ref Interval
Triglycerides			
Serum Triglycerides	145.0	mg/dl	Desirable : <150
Method: GPO-POD			Borderline high : 150-199
Machine: Abbott ALINITY CI			High : 200-499
			Very high : > 500

Serum Triglyceride are a type of fat in the blood. High triglyceride levels are associated with several factors, including being overweight, eating too many sweets or drinking too much alcohol, smoking, being sedentary, or having diabetes with elevated blood sugar levels. Analysis has proven useful in the diagnosis and treatment of patients with diabetes mellitus, nephrosis, liver obstruction, other diseases involving lipid metabolism, and various endocrine disorders. In conjunction with high density lipoprotein and total serum cholesterol, a triglyceride determination provides valuable information of the assessment of coronary heart disease risk. It is done in fasting state. Measurements of triglyceride are used in the diagnosis and treatment of patients with acute and chronic pancreatitis, extrahepatic biliary obstruction, and other diseases involving lipid metabolism.

Method: Calculated			
SGOT/SGPT Ratio	0.96	Ratio	0.7 - 1.4
Method: Calculated			

Bilirubin is a yellowish pigment found in bile and is a breakdown product of normal heme catabolism. Elevated levels results from increased bilirubin production (eg hemolysis and ineffective erythropoiesis); decreased bilirubin excretion (eg; obstruction and hepatitis); and abnormal bilirubin metabolism (eg; hereditary and neonatal jaundice). Conjugated (direct) bilirubin is elevated more than unconjugated (indirect) bilirubin in viral hepatitis; drug reactions, alcoholic liver disease conjugated (direct) bilirubin is also elevated more than unconjugated (indirect) bilirubin when there is some kind of blockage of the bile ducts like in Gallstones

Test Name	Value	Unit	Bio. Ref Interval
getting into the bile ducts tumors & Scarring of the bile ducts. Increased unconjugated (indirect) bilirubin may be a result of hemolytic or pernicious anemia, transfusion reaction & a common metabolic condition termed Gilbert syndrome.			
AST levels increase in viral hepatitis, blockage of the bile duct ,cirrhosis of the liver, liver cancer, kidney failure, hemolytic anemia, pancreatitis, hemochromatosis. Ast levels may also increase after a heart attck or strenuous activity. ALT is commonly measured as a part of a diagnostic evaluation of hepatocellular injury, to determine liver health. Elevated ALP levels are seen in Biliary Obstruction, Osteoblastic Bone Tumors, Osteomalacia, Hepatitis, Hyperparathyroidism, Leukemia, Lymphoma, paget's disease, Rickets, Sarcoidosis etc.			
Elevated serum GGT activity can be found in diseases of the liver, Biliary system and pancreas. Conditions that increase serum GGT are obstructive liver disease, high alcohol consumption and use of enzyme-including drugs etc.			
Serum total protein, also known as total protein, is a biochemical test for measuring the total amount of protein in serum..Protein in the plasma is made up of albumin and globulin. Higher-than-normal levels may be due to: Chronic inflammation or infection, including HIV and hepatitis B or C, Multiple myeloma,Waldenstrom's disease. Lower-than-normal levels may be due to: Agammaglobulinemia, Bleeding (hemorrhage), Burns, Glomerulonephritis, Liver disease, Malabsorption, Malnutrition, Nephrotic - Human serum albumin is the most abundant protein in human blood plasma. It is produced in the liver.Albumin constitutes about half of the blood serum protein. Low blood albumin levels (hypoalbuminemia) can be caused by: Liver disease like cirrhosis of the liver, nephrotic syndrome, protein-losing enteropathy, Burns, hemodilution, increased vascular permeability or decreased lymphatic clearance, malnutrition and wasting etc.

The main indication for testing for glucose in urine is detection of unsuspected diabetes mellitus or follow-up of known diabetic patients. Renal glycosuria accounts for 5% of cases of glycosuria in general population.

Proteinuria can be seen in nephrotic syndrome, pyelonephritis, heavy metal poisoning, tuberculosis of kidney, interstitial nephritis, cystinosis, Fanconi syndrome, rejection of kidney transplant. Hemodynamic proteinuria is transient and can be seen in high fever, hypertension, heavy exercise, congestive cardiac failure, seizures, and exposure to cold. Post-renal proteinuria is caused by inflammatory or neoplastic conditions in renal pelvis, ureter, bladder, prostate, or urethra. Ketouria can be seen in uncontrolled Diabetes mellitus with ketoacidosis, Glycogen storage disorder, starvation, persistent vomiting in children, weight reduction program, fever in children, severe thyrotoxicosis, pregnancy and protein calorie malnutrition.

Presence of bilirubin in urine indicates conjugated hyperbilirubinemia (obstructive or hepatocellular jaundice). Bile salts along with bilirubin can be detected in urine in cases of obstructive jaundice. Normally about 0.5-4 mg of urobilinogen is excreted in urine in 24 hours. Therefore, a small amount of urobilinogen is normally detectable in urine. Increased urobilinogen in urine can be seen due to hemolysis, megaloblastic anemia and haemorrhage in tissues. Decreased urobilinogen can be seen in obstructive jaundice, reduction of intestinal bacterial flora, neonates and following antibiotic treatment. The presence of abnormal number of intact red blood cells in urine is called as hematuria. It implies presence of a bleeding lesion in the urinary tract. Hematuria can be seen in glomerular diseases like Glomerulonephritis, Berger's disease, lupus nephritis, Henoch-Schonlein purpura, non glomerular diseases like Calculus, tumor, infection, tuberculosis, pyelonephritis, hydronephrosis, polycystic kidney disease, trauma, after strenuous physical exercise, diseases of prostate (benign hyperplasia of prostate, carcinoma of prostate).

Nitrites are not present in normal urine. Ingested nitrites are converted to nitrate and excreted

in urine. If gram-negative bacteria (e.g. E.coli, Salmonella, Proteus, Klebsiella, etc.) are present in urine, they will reduce the nitrates to nitrites through the action of bacterial enzyme nitrate reductase. As E. coli is the commonest organism causing urinary tract infection, this test is helpful as a screening test for urinary tract infection.

Some organisms like Staphylococci or Pseudomonas do not reduce nitrate to nitrite and therefore in such infections nitrite test is negative.

Leucocyte esterase test detects esterase enzyme released in urine from granules of leucocytes. Thus the test is positive in pyuria.

The International Council for Standardization in Haematology (ICSH) recommends reporting of absolute counts of various WBC subsets for clinical decision making. This test has been performed on a fully automated 5 part differential cell counter which counts over 10,000 WBCs to derive differential counts. A complete blood count is a blood panel that gives information about the cells in a patient's blood, such as the cell count for each cell type and the concentrations of Hemoglobin and platelets. The cells that circulate in the bloodstream are generally divided into three types: white blood cells (leukocytes), red blood cells (erythrocytes), and platelets (thrombocytes). Abnormally high or low counts may be physiological or may indicate disease conditions, and hence need to be interpreted clinically.

The Mentzer index is used to differentiate iron deficiency anaemia beta thalassemia trait. If a CBC indicates microcytic anaemia, these are two of the most likely

Vitamin D, 25-Hydroxy

VITAMIN D (25 - OH VITAMIN D)	16.02	ng/ml	30 - 100
-------------------------------	-------	-------	----------

Method: chemiluminescent immunoassay

Machine: Abbott ALINITY CI

VITAMIN D STATUS	VITAMIN D 25 HYDROXY (ng/mL), Adult	VITAMIN D 25 HYDROXY (ng/mL), Pediatric
DEFICIENCY	<20	<15
INSUFFICIENCY	20 - 30	15 - 20
SUFFICIENCY	30 - 100	20 - 100

Vitamin D is a lipid-soluble steroid hormone that is produced in the skin through the action of sunlight or is obtained from dietary sources. The role of vitamin D in maintaining homeostasis of calcium and phosphorus is well established. The assay measures both D2 (Ergocalciferol) and D3 (Cholecalciferol) metabolites of vitamin D. Vitamin D status is best determined by measurement of 25 hydroxy vitamin D, as it is the major circulating form and has longer half life (2-3 weeks) than 1,25 Dihydroxy vitamin D (5-8 hrs). The reference ranges discussed in the preceding are related to total 25-OHD; as long as the combined total is 30 ng/mL or more, the patient has sufficient vitamin D. Levels needed to prevent rickets and osteomalacia (15 ng/mL) are lower than those that dramatically suppress parathyroid hormone levels (20–30 ng/mL). In turn, those levels are lower than levels needed to optimize intestinal calcium absorption (34 ng/mL). Neuromuscular peak performance is associated with levels approximately 38 ng/mL.

Healthians Labs (A Unit of Expedient Healthcare Marketing Pvt. Ltd.)

GF-08, Himalaya Business Center, 132ft. Ring Road, RTO Circle, Ahmedabad, Gujarat, Pincode - 380027

Terms & Conditions:

- 1) Machine Data is available for last 7 days only. In case of manual testing & outsourced testing, machine data will not be available.
- 2) CBC parameters may vary when it is manually reviewed by the Pathologists.
- 3) **For Thyroid tests** - Circulating TSH shows a normal circadian rhythm with a peak between 11pm-5am and a nadir between 5pm-8pm. TSH values are also lowered after food when compared to fasting in a statistically significant manner. This variation is of the order of $\pm 50\%$, hence time of day and fasting status have influence on the reported TSH level.
- 4) **For Lipid profile** - Lipid and Lipoprotein concentrations vary during the normal course of daily activity. Also, certain drugs, diet and alcohol can have lasting effects on Triglyceride levels. To obtain best results for Lipid testing, a strict fasting of 10-12 hours with a light meal on the previous night is recommended.
- 5) Test results released pertain to the specimen submitted.
- 6) Test results are dependent on the quality of the sample received by the Lab.
- 7) The tests are carried out in the lab with the presumption that the specimen belongs to the patient named or identified in the bill/test request form/booking ID.
- 8) The reported results are for information and are subject to confirmation and interpretation by the referring doctor to co-relate clinically.
- 9) Test results may show interlaboratory variations.
- 10) Liability of Healthians for deficiency of services or other errors and omissions shall be limited to the fee paid by the patient for the relevant laboratory services.
- 11) This report is not subject to use for any medico-legal purposes.
- 12) Few of the tests might be outsourced to partner labs as and when required.
- 13) This report is not intended to replace but to lead by providing comprehensive information. It is recommended that you consult your doctor/physician for interpretation of results.
- 14) All reports might not be applicable for individuals less than 18, pregnant women or individuals suffering from diseases for which health test has not been performed or symptoms not diagnosed.
- 15) This report is based on preventive health test screening and is meant for a healthy lifestyle. It does not provide any recommendation for life threatening situations.
- 16) It is strongly recommended to take required precautions for allergic reactions or sensitivities.
- 17) Authorised partner labs as mentioned for certain tests are as below:
 - HL/PL/001- Metropolis Healthcare Ltd
 - HL/PL/002- Thyrocare technologies Limited
 - HL/PL/003- Lifecell International Pvt. Ltd. - Laboratory Services
 - HL/PL/004- Modern Diagnostic & Research Centre

SUGGESTED NUTRITION

SUGGESTED NUTRITION

Do's

- Have a balanced diet that includes whole grains, pulses, dairy, fruits, vegetables, nuts and healthy fats
- Include fruits like apples, berries and melons in your diet
- Include fresh garlic and fenugreek seeds in your diet
- Include whole grains in your diet like whole wheat bread and other products, brown rice or hand pounded rice, oats
- Take fresh fruit and vegetable juices
- Include calcium rich foods like milk, yoghurt, cheese and green, leafy vegetables
- Include Brazil nuts, sesame seeds, sunflower seeds

Dont's

- Avoid flavoured and seasoned foods
- Decrease intake of colas and sugary drinks
- Avoid saturated fats, trans fats, oily and greasy foods like cakes, creamy or fried foods
- Avoid high cholesterol and calorie dense foods
- Avoid red meat and organ meats
- Avoid salty foods and pickles
- Limit protein intake
- Avoid refined carbs, processed foods
- Limit sugar intake
- Reduce caffeine intake

SUGGESTED LIFESTYLE

SUGGESTED LIFESTYLE

Do's

- Sleep well at night and do relaxing activities
- Maintain ideal weight
- Have regular exposure to sunlight

Dont's

- Avoid overexertion without having food or drink
- Avoid strenuous exercises
- Avoid smoking and alcohol
- Avoid late night heavy meals
- Avoid overeating or calorie rich food
- Limit dining out
- Avoid long periods of inactivity
- Don't ignore your body signals and don't skip your regular health check-ups

SUGGESTED FUTURE TESTS

SUGGESTED FUTURE TESTS

- Complete Hemogram - **Every 2 Month**
- Peripheral Smear Examination By Pathologist - **Every 2 Month**
- Lipid Profile Advance - **Every 3 Month**
- Liver Function Test - **Every 3 Month**
- Kidney Function Test Advance - **Every 1 Month**
- Vitamin D Total-25 Hydroxy - **Every 4 Month**

HEALTH ADVISORY

Suggestions for Health & Well-being

Varsha Ashvin Thakkar

Booking ID : 13973755614 | Sample Collection Date : 07/Jun/2025

PHYSICAL ACTIVITY

PHYSICAL ACTIVITY

Physical activities can vary from Regular walks (Brisk or normal), Jogging , Sports, Stretching, Yoga to light weight lifting etc. It is recommended to partake in physical activity at least 30 minutes a day for 3-4 days a week.

If regular workout is difficult, then we can adapt changes such as using stairs instead of lift/escalators and doing household work!

BALANCED DIET

A balanced diet is the key to healthy lifestyle. Include Whole grains, vegetables, whole fruits, nuts, seeds, beans, plant oils in your diet.

It is recommended to always have a high protein breakfast and a light dinner. Avoid items such as processed foods, potatoes and high calorie/sugar products. Don't forget to drink water regularly!

BALANCED DIET

STRESS MANAGEMENT

STRESS MANAGEMENT

Managing stress is an essential part of well-being. Some day to day changes can help such as having sufficient sleep (6-8 hours), indulging yourself in meditation, positive attitude towards lifestyle, using humor, traveling, talking to people whom you feel comfortable with and making time for hobbies by doing what you love to do.

BMI

BMI recommended range is 18.5 to 24.9. Your BMI is **29.35**, which is on a higher side. Please fill your Health Karma to know your BMI results or BMI for your body helps prevent many untimely diseases and goes a long way.

BMI CHART

UNDERWEIGHT	NORMAL	OVERWEIGHT	OBSE
Less than 18.5	Between 18.5 - 24.9	Between 25.0 - 29.9	More than 30
*****	*****	*****	*****

Supplement Suggestions

Varsha Ashvin Thakkar

Booking ID : 13973755614 | Sample Collection Date : 07/Jun/2025

Your test report has indicated that you have certain deficiencies in your body which may hamper your health & wellbeing in the longer run.

In order to fulfill the gaps in nutrition and promote a healthier body we suggest you the following supplements mentioned below:

Deficiency/Out of Range Parameter(s)	Suggested Supplement
Cholesterol-Total, Serum	APPLE CIDER VINEGAR
Vitamin D Total-25 Hydroxy	VITAMIN D3

To order, call 1800-572-000-4

Suggestions for Improving Deficiencies

APPLE CIDER VINEGAR

Boosts Energy & Improves Immunity

Herbved Apple Cider Vinegar with Mother is 100% natural, raw, unfiltered and unpasteurized that has been fermented from Himalayan apples. It contains a substance called mother that consists of antioxidants, proteins, enzymes, and friendly bacteria that offers you a host of health benefits like losing weight, controlling High BP, Sugar & Cholesterol and improving digestion. It can work wonders on your hair making it soft and shiny, controlling dandruff & hairfall and can also prevent acne when applied as a toner externally on your skin.

Benefits of Apple Cider Vinegar:

Helps in weight loss | Helps control cholesterol levels | Lowers blood pressure | Controls hairfall and makes hair soft and shiny | Improves digestion

VITAMIN D3

Improve bone health with enhanced calcium absorption, the natural way

Make your muscles and bones stronger with VITAMIN D3. Sourced from natural substances, it helps in regulating the absorption of calcium and phosphorus, which help keep your bones strong and enhancing the normal immune system functioning. Vitamin D3 is an essential nutrient that's critical for normal growth and development of bones and teeth, as well as improved resistance against certain diseases.

Remember, a lack of vitamin D3 can cause dangerous health situations.

• Rickets (in children) | • Brittle Bones | • Osteoporosis | • Weakened Bones (in adults)

Strengthens Bones & Muscles

Protects Against Pneumonia & Acute Respiratory Infections

Helps in Reducing Depression

Boosts Heart Health

Aids in Kidney Disease Treatment

About Healthians Labs

How we control Report Accuracy at Healthians

Quality Control

We follow Quality control to ensure both **precision & accuracy** of patient results.

Machine Data

We save patient's result values **directly from machines** ensuring no manipulations & no fake values.

QR Code

QR Code based authenticity check on all its reports

Calibration

We make use of calibrators to evaluate the **precision & accuracy** of measurement equipment.

Equipment

Our Labs are equipped with state-of-the-art instruments with **cutting edge technology** to provide faster & reliable results.

EQA

Our Labs participate in EQA & show proven accuracy by checking **laboratory performance** through external agency or facility.
